

SUSTAINMENT COMMAND AND CONTROL

Last Updated: 21 December 2015

The Air Force [sustainment](#) construct depends on [reachback](#), real-time visibility, and control of all resources to reduce the forward footprint and enable more airlift to be dedicated to moving combat power. As a result, rapid resupply and retrograde operations are necessary to sustain forces and maintain a ready flow of repairables to sources of repair. Reachback for sustainment of equipment, information, materiel, and personnel requires robust, long-haul communication links to identify, coordinate, and monitor requirements. There are many locations for combat support reachback. They include component major commands, component numbered Air Forces, and Air Staff agencies as well as the various functional communities, field operating agencies, and centers.
